PROFESIONAL EXPERIENCE

Software Developer Independent Contractor

OVR TECHNOLOGY., Burlington, VT May 2025 – July 2025

- ♦ Developed custom gameplay mechanics for a Minecraft mod that integrates OVR's Omara Device smell technology into a cohesive experience for players.
- ♦ Collaborated with industry members across different disciplines to produce a Minecraft Adventure Map utilizing level design, NPC dialogue systems to create interactive and immersive experiences.

Programming Engineering Intern

BUDDERFLY INC., Shelton, CT May 2024 – June 2024

- ♦ Led the software development for a Java application that allowed the ability to program commercial air conditioning units.
- ♦ Developed a **Patent Pending** tool that by end of internship was cited to reduce manual programming time by 90% and reduced error rate by 100%

PROJECTS

Lead Programmer (Enemy AI & Tools)

WITH IT WE LEAVE Jan 2026 – May 2026

- ♦ Developed scalable AI behavior architecture with Unreal Engine's State Tree with customizable sound-based perception mechanics that influence the monster's decision making.
- ♦ Produced Git LFS repo framework to support capstone team of 16, utilizing pull requests for quality assurance.

Lead Programmer (System & Tools)

PURRSUIT Aug 2025 – Nov 2025

- ♦ Created cross-discipline tools to allow for variations of hexagons for level design, tools to allow artists to easily customize the player characters materials using Unreal's Data Tables.
- ♦ Designed documentation to visualize and illustrate debugging options and system architecture

Lead Programmer (Network & Tools)

BURNTOWN Jan 2025 – Apr 2025

- ♦ Created viable prototype within 10 weeks for the Ubisoft Game Labs Competition
- ♦ Networked gameplay mechanics and created framework for networking architecture utilizing Photon Fusion, creating a custom lobby system with code randomization and a custom UI based keyboard for joining.
